Course Description

This one day course is for contractors, developers and home builders who will be overseeing or be directly responsible for any land clearing, construction, or development activities involving the movement of earth.

As of April 1, 2006 an EPSC Certified Contractor will be required for all land clearing activities. This course is designed to provide those individuals with the knowledge and skills to comply with local, state, and federal regulations regarding erosion prevention and sediment control practices.

The course will provide information regarding the NPDES Phase II Storm Water ordinance, the responsibilities of a certified contractor regarding Erosion Prevention and Sediment Control; the city's permitting processes and an overview of the city's Storm Water Manual. Following the course presentation, a short test will be administered. A passing grade of 70 will be required to obtain certification.

In addition, the course will describe the recertification process that is required every three years.

Outline

- ☛ Welcome
- ☛ Need for certification program
- ☛ Responsibilities of certified contractors
- ☛ Development requiring a certified contractor
- ☛ Initial certification
- ☛ Recertification, reciprocity
- ☛ Coordination with KPDES permitting requirements

Instructor

Matt Powell
City of Bowling Green
Environmental Compliance Division Manager

Mr. Powell has experience at both the State and Municipal levels in Erosion and Sediment Control Regulations and Inspections. He has worked in the development of erosion control training as well as the development of EPSC Permits. Currently, he is responsible for the City's Storm Water Program, including plan review and site inspection.

Matt is a:

- Certified Professional in Erosion and Sediment Control
- Certified Professional in Storm Water Quality
- Certified Municipal Storm Water Specialist
- Qualified Kentucky Erosion Prevention and Sediment Control Inspector
