Description <p>This BMP prevents fuel spills and leaks and their impact to stormwater by using off-site facilities, fueling in designated areas only, enclosing or covering stored fuel, implementing spill controls, and training employees and subcontractors.</p>	Approach <ul style="list-style-type: none"> ➤ Use off-site fueling stations as much as possible. Fueling vehicles and equipment outdoors or in areas where fuel may spill/leak onto paved surfaces or into drainage pathways can pollute stormwater. If you fuel a large number of vehicles or pieces of equipment, consider using an off-site fueling station. These businesses are better equipped to handle fuel and spills properly. Performing this work off-site can also be economical by eliminating the need for a separate fueling area at your site. ➤ If on-site fueling can not be avoided, designated areas, located away from drainage courses, can be used to prevent the run-on of stormwater and the runoff of spills. ➤ Educate employees and subcontractors not to “top-off” fuel tanks. ➤ When fueling, use secondary containment, such as a drain pan or drop cloth, to catch spills/leaks. ➤ Place a stockpile of spill cleanup materials where it will be readily accessible. ➤ Use adsorbent materials on small spills rather than hosing down or burying the spill. Remove the adsorbent materials promptly and dispose of properly. 														

Activity: Vehicle and Equipment Fueling**GHP-12**

|---------------------------------|--|
| Approach
(cont'd) | <ul style="list-style-type: none">➤ Observe Federal and State requirements regarding stationary above-ground storage tanks with special attention given to secondary containment.➤ Avoid mobile fueling of mobile construction equipment around the site; rather, transport the equipment to designated fueling areas. With the exception of tracked equipment such as bulldozers and perhaps forklifts, most vehicles should be able to travel to a designated area with little lost time.➤ For a quick reference on disposal alternatives for specific wastes, see the table presented in the Employee/Subcontractor Training BMP fact sheet, Table GHP-14-1.➤ Locate fueling areas on a paved surface where practical.➤ Protect fueling areas with berms and/or dikes to prevent run-on, runoff, and to contain spills.➤ Use vapor recovery nozzles to help control drips as well as air pollution where required by Air Quality Management Districts. |
| Maintenance | <ul style="list-style-type: none">➤ Keep ample supplies of spill cleanup materials on-site.➤ Inspect fueling areas and storage tanks on a regular schedule. |
| Inspection
Checklist | <ul style="list-style-type: none"><input type="checkbox"/> Secondary containment area is properly maintained and preventing petroleum products from runoff to streams and ditches.<input type="checkbox"/> Construction site has proper materials for cleaning spills.<input type="checkbox"/> Fueling tanks are working properly. |
